I'm a cybersecurity-focused Business Administration student at UT Arlington (graduating December 2025) with hands-on project experience in network security, Python automation, and cloud security implementation. I'm passionate about building practical security solutions that protect both organizations and the people they serve, combining technical skills with a business mindset to address real-world threats. My background in data security, process improvement, and system development positions me to help organizations strengthen their security posture while maintaining operational efficiency and compliance.
